Company Representatives at AMERICANA 2013:

Douglas J. Herber P.E- President

Bruce J. Lesikar Ph.D, P.E- Vice President of Engineering

Company Profile:

KASELCO Water Treatment Solutions has been in the water treatment business for over 30 years. While we provide a variety of water treatment solutions, we specialize in electrocoagulation (EC). Electrocoagulation water treatment technology can remove a variety of different constituents from the waste water stream without the use of expensive chemicals. Our EC process uses numerous patented features to effectively use electricity to remove constituents from the waste water, allowing for up to a 50% reduction in operational costs. Since EC does not use chemicals in the treatment process, the EC treatment generates approximately 60% less sludge by volume. The sludge treated by EC is non leachable in most operations and will pass TCLP leachate tests making EC an environmentally friendly means of water treatment.

Product Line(s):

Water treatment solutions, Electrocoagulation water treatment equipment and services. Non-chemical solutions.

Objective(s) at AMERICANA 2013:

- Establish contact with prospective enterprises and project clients seeking waste water solutions that will reduce operational costs.
- Connect with companies who are interested in non-chemical solutions to waste water or environmental compliance issues.
