Company Representatives at CanWEA 2012:

Clayton Troxell - Senior Vice President

ctroxell@airgenesiswind.com

Danny Smith - President/Inventor

skipsmith@airgenesiswind.com

Company Profile:

Airgenesis offers a revolutionary mechanical concept and design for wind turbine developers as their wind turbines are capable of generating 11 MW output both on land and offshore.

Company Services / Operations

To provide wind turbine manufacturers and farm developers with the ability to develop more efficient, lower cost high output wind turbines. Low RPM increases safety for avian populations and flying blade ice. Airgenesis wind turbines operate at velocities outside current recognized thresholds and are up to 80% more efficient than current traditional commercial systems. Most of the equipment is mounted at the base of the tower reducing the loads at the top as well as maintenance costs.

Objectives at CanWEA 2012:

- To build relationships with wind farm developers and wind turbine manufacturers in Canada
- Provide exclusive licensing rights to an interested partner.
