**Company Representatives at the 23<sup>rd</sup> World Mining Congress:**

Karl Gugel, Director/Owner

Stephen Forgyson, Engineering Manager

Jaime Ramirez, Software Development Manager

**Company Profile:**

Digital Control Lab is an electronics company that sells vibration monitoring equipment in the mining and cement industries. They have been in business for over 15 years and have systems installed worldwide, including Europe, North Africa, Japan, Brazil and India. They are interested in further expansion around the world where mining is prevalent.

**Product Line(s):**

Digital Control Lab will be promoting *MineralScan MillSlicer*, a vibration analysis tool for minerals and mining that produces a highly accurate mill fill level signals and 360 degree mill load profile. This product can be used to run a mill under automated loop control or greatly assist control room operations under manual control and optimize process operation and liners lifetime.

**Objectives(s) at the 23<sup>rd</sup> World Mining Congress:**

Digital Control Lab will be looking to connect with distributors and sales representatives for the purpose of developing business partnerships in Quebec and Canada. Potential partners should be experienced in servicing the mining industry and have expertise in mining operations, instrumentation and process control.
