David Graf, Manager of Business Development, Mobile: (843) 991-1219

**Company Profile:**

AMR provides continuity ground monitors, mine wide atmospheric monitoring, voice/text communications solutions and personnel/equipment tracking systems to enhance safety and improve productivity in underground or surface mining operations. Since 1975, we have supported the mining and industrial sectors with wired or "pilotless" electrical ground monitors; atmospheric monitoring sensors for all gas types; vacuum circuit breakers; speed and motion sensors; and material tip switches. In recent years we have added wireless communications and tracking solutions as well as Remote Racking Systems for underground power centers to our services.

**Product Lines:**

- Continuity Ground Monitors – used for ground conductor monitoring of industrial AC electrical cables
  - We have units with the option to not use the more fragile pilot conductor.
  - Other advantages include its physical size, sensitivity and tolerance for minimal false trips.
- Wireless communications / personnel & equipment tracking
  - Our systems use 802.11 Wi-Fi standards enabling off the shelf smart devices such as phones, tablets and computers.
  - Features include: VoIP, zone or continuous tracking, rugged enclosures, several battery or AC/DC power options, directional or omni-directional antennas, plus Ethernet, wireless or fiber optic backbone options.
- Atmospheric monitoring systems – Wired and wireless sensors for all typical mining and industrial gases.
  - Software suite designed for monitoring and recording all values plus data from third party I/O sensors.

**Objectives(s) at CIM 2015:**

To find a Distributor, Wholesaler, Agent or Sales Representative in the Canadian region with:

- An ability to speak English
- A technical service person on staff, or sales staff, with technical background, potentially cover all mining regions in a province or territory unless we identify additional groups
