Company Representatives at CIM 2015:

George Manos, President, Office: (952) 556-0173
Steve Faber, Chief Sales Officer, Office: (952) 556-0173

Company Profile:

SheerWind is a Minnesota based energy technology company that has developed INVELOX. SheerWind's INVELOX™ technology transforms wind into a reliable energy source providing clean, affordable electrical energy to anyone, anywhere. The patented technology funnels wind to increase its speed and harvest wind safely with ground-based turbines. Increasing wind speed allows power generation in low wind areas where traditional turbines simply won't turn. By addressing the greatest challenges in the renewable energy industry: cost, reliability, viability, environmental, and health impacts, SheerWind is changing the course of power generation.

Product Lines:

INVELOX products include wind power systems designed from 5kW-50kW for rapid deployment or emergency use, 200kW–1MW for communities, and 1MW– 25MW for utility scale. Unlike traditional wind power INVELOX can be installed in or near urban areas, including on rooftops and integrated into structures.

Objectives(s) at CIM 2015:

To find partners for Sheerwind via:

- Distributor
- Wholesaler
- Supply chain
- Agent or sales representative
- Licensee

A good partner for SheerWind would have the following:

- Established presence in the Canadian market
- Good deal flow
- Access to capital
- Well connected within the local and central government
- Strong supply chain to allow for system commissioning and continued servicing (O&M) of installed INVELOX systems
- Experience in traditional and renewable energy systems
