Market Drivers:

- The Government of India (GOI) is analyzing over 750 large energy users in an effort to reduce energy consumption by about 10000 MW per year
- The targeted sectors include railways, aluminum, cement, chlor-alkali, pulp and paper, fertilizers, steel industries and power generation plants
- The Bureau of Energy Efficiency (BEE) in India is mandating specific energy consumption decreases in these large energy-consuming industries
- The market potential for industrial energy efficiency is approximately \$27 billion; The potential for green buildings is over \$3 billion
- India suffers from obsolete technologies, high energy costs, limited natural resources and chronic power shortages in some areas
- There is an increased awareness of benefits of energy efficiency and savings
- Financing options for energy efficiency are available, such as the Small Industries Development Bank of India (SIDBI) programs

Mission Activities:

New Delhi:

- Attend the US - India Energy Efficiency Technology Cooperation Conference, New Delhi co-hosted by Ministry of Power, GOI and USDOE
- Meetings with Government of India officials
- One-on-one matchmaking meetings
- Networking reception

Chennai:

- One-on-one matchmaking meetings
- Site visit
- Networking reception

Mumbai:

- One-on-one matchmaking meetings
- Roundtable on Financing Energy Efficiency projects
